Professional Experience

☐ Shopping cart management System

Completed end to end case study of shopping cart management System. The main objective of this project is user can sign up and login with jwt authentication and spring security. If username or password is authenticated, then he will be redirected to shopping cart page else it would give error that "Incorrect username or password". Users' login details will be saved in database in encrypted form. Once logged in, he will be able to add products to cart. After adding the product to cart, he can proceed to order, and user must fill their details like address and proceed to payment page where their user needs to fill his debit card details. As payment is done, the order details will automatically be shown on the booking history page. And he can update the profile details.

Admin functionality: Admin can add, delete, update the product details and admin can also deactivate any account and admin can also perform same operations that as user.

Roles Performed:

- ☐ Backend Developer
- ☐ Analyzing the requirements and creating Test Cases.
- ☐ Eureka microservices

Technology Used :

- ☐ Language-Spring boot REST, React, CoreJava
- ☐ Tools-Spring Tool Suite, Swagger, Visual Studio Code
